Applied Atomic Collision Physics, Volume 1: Atmospheric Physics and Chemistry focuses on the applications of atomic collision physics in atmospheric physics and chemistry. The emphasis is on the physics of the upper atmospheres of the earth and planets as well as astrophysics, including solar physics, the physics of planetary nebulae, and reactions in interstellar space.

Applied atomic collision physics : Massey, Harrie Stewart

Applied Atomic Collision Physics, Volume 3: Gas Lasers describes the applications of atomic collision physics in the development of many types of gas lasers. Topics covered range from negative ion formation in gas lasers to high-pressure ion kinetics and relaxation of molecules exchanging vibrational energy.

Applied Atomic Collision Physics, Volume 3 by E. W

Applied Atomic Collision Physics, Volume 4: Condensed Matter deals with the fundamental knowledge of collision processes in condensed media. The book focuses on the range of applications of atomic collisions in condensed matter, extending from effects on biological systems to the characterization and modification of solids.

ATOMIC PHYSICS. Collisions give sense of direction. The ability to measure small or slow rotations relative to an inertial frame is valuable in navigation as well as in fundamental physics. A device that exploits techniques developed in atomic physics could lead to sensitive and compact rotation sensors.

Pure and Applied Physics | Topics in Atomic Collision

This five-volume work demonstrates the applicability of knowledge of atomic collision processes to pure and applied physics and chemistry. The volumes explore the significance of atomic physics to such areas of study as atmospheric physics and astrophysics, controlled fusion, laser physics, and condensed matter.

Atomic Physics, P. Ewart 2 Radiation and Atoms The lifetime, τ , is a statistical parameter related to the time taken for the population of the excited state to decay to $1/e$ of its initial value. This exponential decay is reflected in the experimental decay of the amplitude $E(t)$ of the light wave emitted.
