Characterization. High-functioning autism is characterized by features very similar to those of Asperger syndrome. The defining characteristic most widely recognized by psychologists is a significant delay in the development of early speech and language skills, before the age of three years. The diagnostic criteria of Asperger syndrome exclude a general language delay.

Dr. Walsh: Autism is very treatable and complete recovery is possible in young persons whose brains have not completed the early development process. I've worked with thousands of patients with an autism spectrum disorder and seen hundreds who achieved full recovery after biochemical therapy and a special diet.

Dr. William Walsh on Autism, OCD, PANDAS - ACN Latitudes

Autism is a developmental disorder characterized by difficulties with social interaction and communication, and by restricted and repetitive behavior. Parents usually notice signs during the first two or three years of their child's life. These signs often develop gradually, though some children with autism reach their developmental milestones at a normal pace before worsening.
