In mathematics, a periodic function is a function that repeats its values in regular intervals or periods. The most important examples are the trigonometric functions, which repeat over intervals of 2π radians. Periodic functions are used throughout science to describe oscillations, waves, and other phenomena that exhibit periodicity. Any function that is not periodic is called aperiodic.

Periodic function - Wikipedia

Carleson's theorem is a fundamental result in mathematical analysis establishing the pointwise almost everywhere convergence of Fourier series of L^2 functions, proved by Lennart Carleson (). The name is also often used to refer to the extension of the result by Richard Hunt () to L^p functions for $p \geq 1$ (also known as the Carleson–Hunt theorem) and the analogous results for ...
