Crystal Pharmatech - Chiral Separation by Crystallization

We highlighted that a chiral active pharmaceutical ingredient only forms a co-crystal with one of two enantiomers of a chiral co-crystal former (or co-former), which suggests that a racemic mixture can be resolved using enantiospecific co-crystallization in solution.

Innovative Chiral Resolution Using Enantiospecific Co

No actual measurement was made, consequently it seemed that growing chiral nuclei were broken down to the smallest nucleus, necessary for chiral crystallization and chiral crystallization ensued. The chirality of the first growing nucleus will win and dominate the chirality of the crystal formation.
