Highlights On a per area basis organic farming, generally, has low environmental impacts. The benefits of organic farming are reduced when using product unit comparison. High levels of variation exist within both organic and conventional systems. Modelling studies tend to overestimate the benefits of organic farming. The relative impacts of the systems vary between different product groups.

The environmental impact of transport is significant because transport is a major user of energy, and burns most of the world's petroleum. This creates air pollution, including nitrous oxides and particulates, and is a significant contributor to global warming through emission of carbon dioxide. Within the transport sector, road transport is the largest contributor to global warming.
