Endocrine disruption: Parabens are potential endocrine disruptors due to their ability to mimic estrogen. In cell studies, parabens have been found to weakly bind to estrogen receptors. Studies demonstrate that at sufficient concentrations, parabens can increase cell proliferation in human breast cancer MCF-7 cells, which are often used as a sensitive measure of estrogenic activity.

An in vivo role of HSD17B7 and 12 in the estrone/17 β -estradiol redox balance cannot be completely excluded whereas that of other HSD17Bs is negligible. Nevertheless, HSD17Bs and other enzymes like aldo-keto reductases (AKR) are involved in the intracrine metabolism of androgens and progestogens that can in turn influence the estrogen signalling.

Local estrogen metabolism (intracrinology) in endometrial

The hypothalamus is a part of the brain responsible for controlling several body functions, including body temperature. A hormonal imbalance disrupts your body's levels of estrogen "the primary female sex hormone" and diminishes its production.
