In physics and engineering, fluid dynamics is a subdiscipline of fluid mechanics that describes the flow of fluids—liquids and gases. It has several subdisciplines, including aerodynamics (the study of air and other gases in motion) and hydrodynamics (the study of liquids in motion). Fluid dynamics has a wide range of applications, including calculating forces and moments on aircraft ...

In nonideal fluid dynamics, the Hagen–Poiseuille equation, also known as the Hagen–Poiseuille law, Poiseuille law or Poiseuille equation, is a physical law that gives the pressure drop in an incompressible and Newtonian fluid in laminar flow flowing through a long cylindrical pipe of constant cross section. It can be successfully applied to air flow in lung alveoli, or the flow through a ...

Available in 17 models to handle a wide range of processing requirements, Vector peristaltic pumps are ideal for pumping challenging fluids without altering their composition.. They move high-viscosity (up to 100,000 cps) pasty, pulpy, thick, abrasive, and corrosive solutions as well as fluids containing solids up to 3-1/2 inches (90 mm) in size.
