Thermal expansion is the tendency of matter to change in shape, area, and volume in response to a change in temperature.. Temperature is a monotonic function of the average molecular kinetic energy of a substance. When a substance is heated, the kinetic energy of its molecules increases. Thus, the molecules begin vibrating/moving more and usually maintain a greater average separation.

In physics, redshift happens when light or other electromagnetic radiation from an object undergoes an increase in wavelength. "Redshifting" does not mean that the light is actually red, or actually becomes red. The term "red" refers to the fact that in human terms, longer wavelengths are found at the red end of the visible spectrum. Whether or not the light is visible, a "redshift" means an ...

The ecocirc XL is a highly efficient circulator that enhances commercial hydronics systems with superior quality and dependability. State-of-the-art hydraulics, advanced motor design, intelligent controls, and smart communication capabilities highlight expert engineering across a broad range of HVAC and plumbing applications.

Welcome to the website for expansion microscopy protocols. Here you can find relevant papers, protocols, materials lists, and advice on expansion microscopy (ExM), a new technology for imaging biological specimens with fine detail by physically making them bigger through an isotropic chemical expansion process that preserves nanoscale detail.
