

the limits to growth pdf

The Limits to Growth (LTG) is a 1972 report on the computer simulation of exponential economic and population growth with a finite supply of resources. Funded by the Volkswagen Foundation and commissioned by the Club of Rome, the findings of the study were first presented at international gatherings in Moscow and Rio de Janeiro in the summer of 1971.

For the last half dozen years this web site has served as my "explorer's notebook". It documents, in a very personal voice, my journey of discovery through the worlds of energy, ecology, economics and human culture. It describes my point of view on the largely unrecognized, widely misunderstood and potentially tragic predicament facing humanity as a result of our refusal to accept limits on ...

Economic growth is the increase in the inflation-adjusted market value of the goods and services produced by an economy over time. It is conventionally measured as the percent rate of increase in real gross domestic product, or real GDP.. Growth is usually calculated in real terms - i.e., inflation-adjusted terms "to eliminate the distorting effect of inflation on the price of goods produced.

The recent Paris accord on global climate change is a key step in acknowledging biophysical limits to human actions, but the challenge of respecting the biosphere’s ecological limits remains underrated. We analyze how respecting these limits squarely conflicts with an economy centered on growth and technology to mitigate environmental stress.
